Error Function

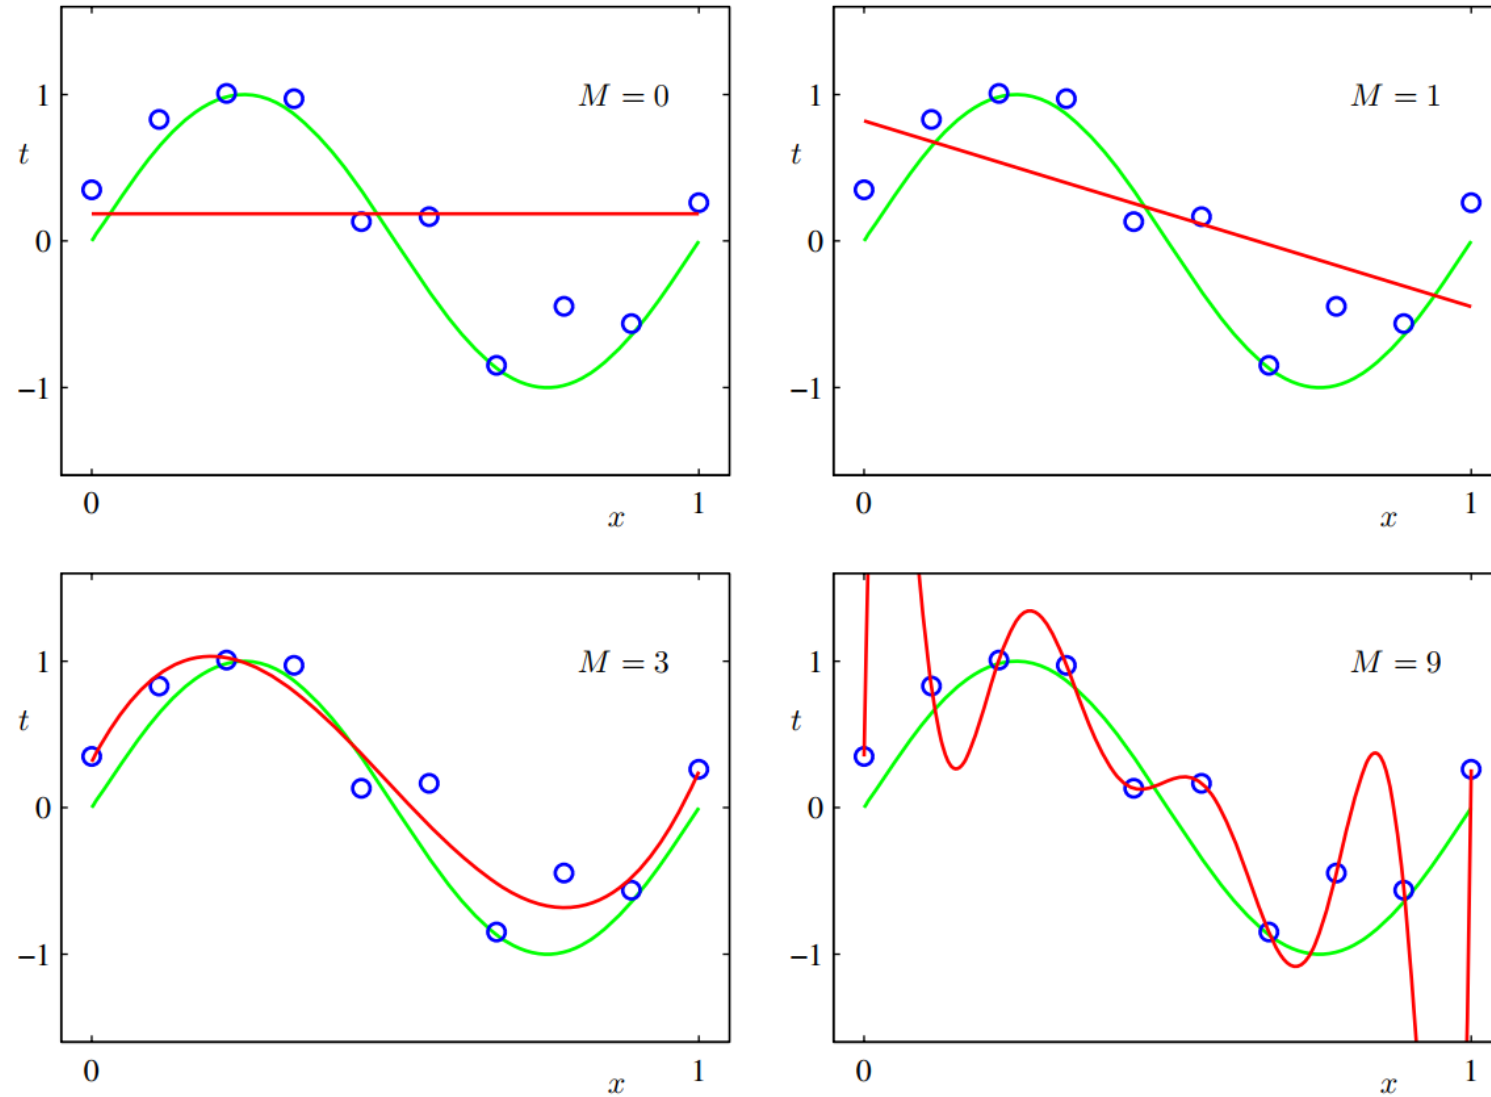

$$E(\mathbf{w}) = \frac{1}{2} \sum_{n=1}^N \{y(x_n, \mathbf{w}) - t_n\}^2$$

Minimizing an *error function* that measures the misfit between the function $y(x_n, \mathbf{w})$, for any given value of $\mathbf{w}$, and the training set data points.

Regularization

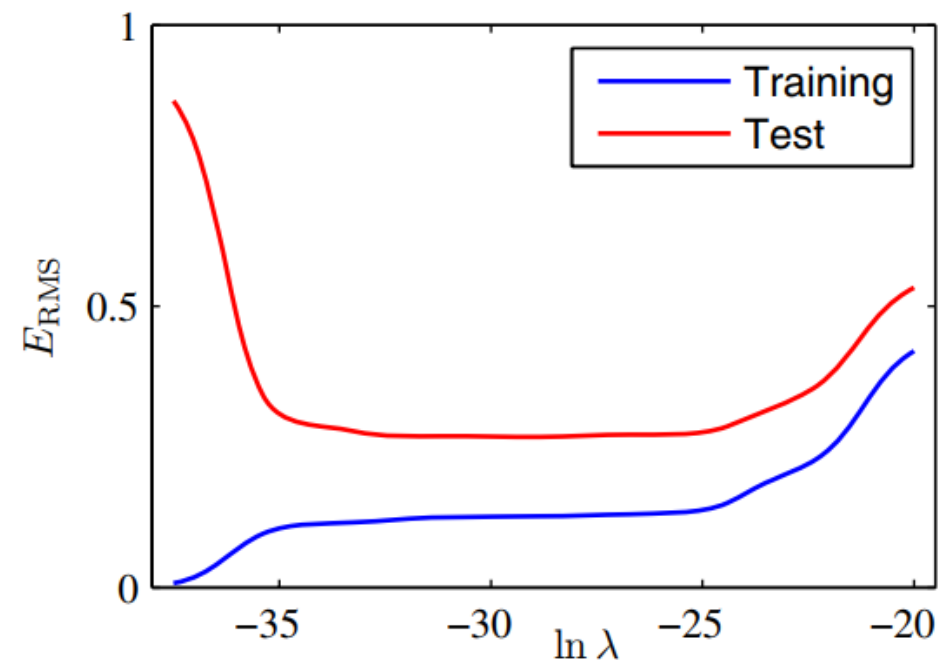

$$E(\mathbf{w}) = \frac{1}{2} \sum_{n=1}^N \{y(x_n, \mathbf{w}) - t_n\}^2 + \frac{\lambda}{2} \|\mathbf{w}\|^2$$

where $\|\mathbf{w}\|^2 \equiv \mathbf{w}^T \mathbf{w} = w_0^2 + w_1^2 + \dots + w_M^2$

- Shrinkage
- Ridge regressor:
- Weight Decay
